

# THE KISMET MANIFESTO: The No-Code "Super-Aggregator" Platform

**Status:** Final Strategic Directive **Date:** November 21, 2025 **Prepared For:** Kismet Finance Group (Josh/Shane) **Authored By:** The Global Strategy Council (Chief Strategist, Tech Innovator, Eastern Strategist, Founder-Operator)

## 1. Executive Summary: The "White Glove" Pivot

The mandate is clear: **No Microsoft. No SMS spam. No Code.**

Kismet Finance Group is pivoting from a "Chatty Sales Consultancy" to a technology-enabled **"Super-Aggregator."** To achieve this without corporate bloat (Microsoft) or technical debt (Code), we are deploying a **Custom Operating System (OS).**

This system rejects the "spammy" volume-based approach of automated SMS. Instead, it leverages automation to empower **instant human connection.** We are not automating the *relationship*; we are automating the *administration* so the relationship can flourish.

### The Council's Verdict

- **Chief Strategist:** "This is the only path to scale. We are building a platform, not just a sales team."
- **The Eastern Strategist:** "We reject the noise of SMS. We choose the silence of efficiency. When Kismet speaks, it is a human voice, not a robot. This builds *Guanxi* (deep trust)."
- **Founder-Operator:** "It's simple. If Josh can't run it from his iPad without calling IT, we don't build it."
- **Tech Innovator:** "We use the 'Modern Data Stack': Airtable for the brain, Make.com for the nerves, Google Workspace for the body."

## 2. The Architecture: "The Custom OS"

We are rejecting the "Google AppSheet" path (too clunky) and the "Pipedrive" path (too rigid). We are building a bespoke **No-Code Platform.**

### A. The Brain: Airtable (Database & Interface)

- **Why:** It is the only tool that handles the "Many-to-Many" relationships of your business (One Client <-> Many Deals <-> Many Referral Partners) without code.
- **The "Josh-Proof" Interface:** We will not show the team the raw database spreadsheet. They will work solely in **Airtable Interfaces.**
  - **The Dashboard:** Big buttons. "Log Call," "Add Lead," "Check Status."
  - **The View:** Only shows *their* active leads. No distractions.

### B. The Nervous System: Make.com (Logic & Automation)

- **Why:** It handles complex logic visually. We can "see" the data flow.

- **Function:** It connects the website, email, and database. If a lead comes in, Make.com decides who gets it and updates Airtable instantly.

### C. The Body: Google Workspace (Identity & Security)

- **Why:** You already have it. It provides the secure login (SSO) and document storage (Drive).
- **Role:** Acts as the "Identity Layer." Users log in to Kismet using their Google credentials.

## 3. The Communication Strategy: "No SMS, Just Speed"

**The Problem with SMS:** It feels cheap, intrusive, and is increasingly regulated (ACMA Sender ID laws). **The Solution:** The "**White Glove**" Speed-to-Lead Protocol.

Instead of an auto-text ("Thx 4 ur call"), the system triggers an internal "**Code Red**" alert.

### The "Missed Call" Workflow (Re-Engineered)

1. **Trigger:** Client calls, line acts busy/missed.
2. **The System (Make.com):**
  - Instantly logs the call in Airtable as "Urgent Inbound - Missed".
  - **Action:** Sends a **Google Chat / Slack P1 Alert** to the specific Rep's phone: "🔥 MISSED CALL: [Client Name]. Click to Call Back NOW."
3. **The Human:** The Rep taps the notification and calls back within 60 seconds.
  - *Script:* "Hi [Name], Josh here. saw I just missed you—I stepped out of a meeting to catch you. What's up?"
4. **The Result:** The client feels *valued*, not processed. This is the "Eastern Strategy" of winning through superior service, not superior volume.

## 4. Compliance & Governance (The PRIS Act)

**The Risk:** The WA *Privacy and Responsible Information Sharing Act (PRIS) 2024* and upcoming Federal Privacy Act changes. **The Shield:**

1. **Data Sovereignty:**
  - We will utilize **Airtable Enterprise Scale** (when ready) which supports **AWS Australia Data Residency**.
  - This ensures client financial data never leaves Australian legal jurisdiction, a requirement for future government contracts.
2. **Audit Logs:**
  - Make.com will log every automated action. We will know exactly *when* a lead was processed and *who* touched it. This protects Kismet in disputes.

## 5. Implementation Roadmap

### Phase 1: The Foundation (Weeks 1-2)

- **Action:** Setup Airtable Workspace.
- **Build:** Create the 4 Core Tables:

1. **People** (Clients/Humans)
  2. **Deals** (Applications/Loans)
  3. **Partners** (Accountants/Referrers)
  4. **Interactions** (The "Memory" of the firm)
- **Migration:** Import clean data from existing Google Sheets.

### Phase 2: The Nervous System (Weeks 3-4)

- **Action:** Configure Make.com.
- **Build:** The "Inbound Lead" Webhook.
  - *Logic:* Web form -> Deduplicate in Airtable -> Alert Rep via Google Chat.
- **Milestone:** First automated lead processed without human data entry.

### Phase 3: The Interface (Week 5)

- **Action:** Build the "Rep Cockpit" in Airtable Interfaces.
- **Design Rule:** "The Grandmother Test." If it requires explanation, it is too complex. Big fonts, clear buttons.
- **Launch:** Handover to Josh/Shane on iPad.

## 6. Commercials & Ownership

### Total Cost of Ownership (Estimated):

- **Airtable Business:** ~\$45/user/month.
- **Make.com Pro:** ~\$16/month.
- **Google Workspace:** Already paid.
- **Savings:** \$0 spent on SMS credits. \$0 spent on expensive Microsoft Dynamics consultants.

**Ownership Clause:** All "No-Code" logic (Make.com scenarios) and Database Schemas are **Work-For-Hire**. Kismet Finance Group owns the IP 100%.

### Final Word from the Council

*"We have stripped the fat. No Microsoft bloat. No SMS noise. Just a lean, intelligent data engine that puts your team in front of the client faster than anyone else in Perth."*

**Approved for Execution.**
