Outlook-4dgqz5mm;

Hi Kevin,

Appreciate the response — this is exactly the energy and clarity we were hoping for.

We're aligned with your approach:

Keep it simple
No over-engineering
Build the nervous system first
Make it clean, fast, and rep-proof
Iterate through feedback until it's razor-sharp

We don't need bells and whistles.

We need a system that collects leads cleanly, moves them predictably, and makes the follow-up process impossible to fail.

The deliverables you outlined are perfect, the System Plan, infographic, and the Notebook-LM hub will give us everything we need to stay aligned across the team.

Your choice of stack makes sense.

Airtable feeding into Google Workspace gives us:

- flexibility
- custom relationships
- fast iteration
- no enterprise bloat
- predictable scaling for the Good AI phases

The flow you're mapping (Door Knock → Consult → Deal) is exactly how we operate, so we're excited to see how you architect it.

Once you send the System Plan, me and Josh will review and turn around feedback fast so you can keep momentum without bottlenecks.

We're keen to get this built properly.

Let's make it solid.

Thanks,

Best regards.

**Hello, I'm
Shane Hewson**

Subject: Re: Good AI

Hi Shane,

I've reviewed the brief. First off—thank you for the clarity. It's so very rare to see a project scope this well-defined, specifically regarding the data models and the distinction between "over-engineering" vs. "solid basics." This is refreshing vs the vague requests I normally receive

I accept the challenge. This is exactly the kind of operational architecture I've been wanting to sink my teeth into.

I am confident we can build a "sales nervous system" that integrates tightly with your Google Workspace while keeping the UI dead simple for Josh and the reps and iteration and feedback loops will be implemented until optimal precision & effectiveness is accomplished with each of you.

Next Steps: I will have the detailed **System Plan** (Deliverable #1) sent to you by tomorrow. For those who aren't big on detailed, the following will also be provided:

- 1x infographic of key areas and impact points for quick querying.
- Since you know my hack, i'll remove the pretty bells and whistles Notebook-LM with the reports & audio overview and video instructions as a base knowledge hub to guide the plan and keep it up-to-date and as well as keep all interested parties updated at all times.

This plan will outline:

1. **The Stack:** Likely centering on a low-code database (like Airtable) that feeds directly into Google Workspace, allowing for the custom data relationships (Super, Income, Housing Status) you need without the enterprise price tag.
2. **The Diagram:** How the data flows from Door Knock -> SMS -> Deal.
3. **The Logic:** Why this specific setup scales for the future "Good AI" phases.

My method for research and multi-reasoning analysis is available for all scrutiny if anyone wants to be thorough.

Let's build something solid.

Thanks,
Kevin P.L Tan

Subject: Good AI

1. Intro & Expectations

Kevin,

Me and Josh are really impressed with your AI and automation skillset and the way you think about systems.

Before we move into anything bigger together or explore building and scaling Good AI with you, we want to start with a real, practical project inside Kismet that:

- gives us a proper feel for how you build, communicate, document and deliver
- gives you a proper feel for how we operate as a business, how we sell, and how we think about scale

This is not a “test to catch you out” – we already know you’re talented.

This is a working project that Kismet actually needs, and that we will be using daily.

If this build goes well, meaning:

- the system is clean
- it works
- it’s documented
- the team can use it without you holding their hand

...then we’ll be ready to sit down and seriously talk about how we push forward together with Good AI on a bigger scale.

We’re not going to micromanage the tech – we want to see your best work, but within clear, practical rules so the system is usable and not over-engineered.

Everything below is what we need.

Let’s build something solid.

Shane & Josh
Kismet Finance Group

2. Context – What Kismet Does (So the System Makes Sense)

Kismet Finance Group is a consulting / referral business.

We:

- generate leads through door-knocking and soon digital marketing (Meta ads, etc.)
- sit down with clients to talk about tax, super, cost-of-living, and property
- do not give financial advice; we refer to licensed professionals (brokers, planners, developers, etc.)
- get paid referral fees / commissions when deals go through

Our biggest problems right now:

- We don’t have a clean, simple CRM everyone uses properly.

- We don't reliably track our numbers (leads → consults → deals → revenue).
- Too much is in people's heads, phones, and random spreadsheets.

We want you to build the core operating system for Kismet's sales and client journey.

3. Project Goal – What We Want You To Build

We want a simple, robust, automated system that:

1. Captures every lead (door knock + digital + phone)
2. Tracks the full journey from lead → consult → strategy → deal → settlement
3. Automates basic follow-up and reminders
4. Gives us clear metrics at each step (so we can actually see what's working)
5. Lives on top of tools we actually use (mainly Google Workspace)
6. Is simple enough for Josh and future reps to use daily without being "tech people"

Think of it as Kismet's sales nervous system.

If this works, it becomes the backbone we can later plug full AI and heavy automation into.

4. Tech Stack – Constraints & Direction

We're giving you freedom to choose the tools, but with non-negotiable constraints:

1. It must integrate cleanly with Google Workspace:
 - Gmail
 - Google Calendar
 - Google Drive
 - Google Sheets (or equivalent for data)
2. It must be simple for non-technical users:
 - Reps and Josh should be able to:
 - add/edit leads
 - move stages
 - book consults
 - see who to call
 - view basic reports
 - No crazy UI complexity.
3. We must own all accounts:
 - Accounts are created under our emails / billing, not yours.
 - You get admin access during build and handover, then we can revoke without breaking things.
4. Costs must be sensible:
 - No enterprise-level, \$1k+ per month tools.
 - We're happy with reasonable SaaS where it makes sense.

Your First Deliverable

Before you start building, we want a 1-page System Plan from you that includes:

- what tools you recommend (example: "Airtable CRM + Make + Google Sheets + Twilio")
- a basic high-level diagram of how they connect

- a short written explanation of why this stack makes sense for Kismet

We approve that, then you build.

5. Core Data Model – What We Need to Track

We want you to set up a clear, structured data model. Minimum:

5.1 Lead

A Lead is anyone who has just entered our world.

Fields we need:

- Full Name
- Mobile number
- Email (if captured)
- Address/Suburb
- Source (Door Knock, Meta Ad, Website, Workshop, Referral, etc.)
- Rep (who created the lead)
- Date captured
- Basic notes / context (free text)

Why it matters:

We need to see where leads are coming from, who created them, and what happened next.

5.2 Contact / Client

Once a lead engages with us properly, they become a Contact/Client.

Fields:

- Link back to original Lead
- Main contact details (and partner if applicable):
 - Name
 - Mobile
 - Email
- Age bracket (e.g. 25–35, 35–45, etc.)
- Employment status (Full-time, Part-time, Self-employed, Casual)
- Household income band before tax (we don't need exact numbers) Under 80k, 80-120k, 120k - 200k
- total balance of your loans or mortgage?
- Housing status:
 - Renting
 - Own home with mortgage
 - Own home outright
- Super type:
 - Industry
 - Retail
 - SMSF
- Super balance range (e.g. <100k, 100k+)
- Journey Stage (Lead / Prospect / Client / Settled / Nurture / Dead)

Why it matters:

We make decisions based on super, income, age, and housing status. This structure lets us filter and target properly later.

5.3 Appointments

We need clean appointment management.

Fields:

- Linked Contact
- Appointment type:
 - First Consult
 - Strategy Session
 - Review
 - Workshop 1:Many session
- Date & time
- Format (Phone / Zoom / In-person)
- Status:
 - Booked
 - Completed
 - No Show
 - Rescheduled
- Outcome notes

Why it matters:

Show-up rate and appointment outcomes drive our revenue. We need to see where we're losing people.

5.4 Deals / Opportunities

When there's a real chance of a property or finance deal, we create a Deal/Opportunity.

Fields:

- Linked Contact
- Deal type (Property, Lending, SMSF-related, etc.)
- Developer / Partner name
- Estimated commission
- Current deal stage:
 - Qualified
 - In Progress
 - Offer Made
 - Offer Accepted
 - Settled
 - Lost
- Key dates:
 - Offer date
 - Acceptance date
 - Settlement date

- Commission paid date

Why it matters:

This is where the money comes from. We need a clean pipeline from “this could be a deal” to “money received”.

5.5 Tasks / Activities

We need a basic task system so reps know what to do next.

Fields:

- Task type (Call, SMS, Email, Follow-up, Admin)
- Linked Contact / Lead
- Due date
- Owner (who needs to do it)
- Status (Open / In Progress / Done)
- Notes

Why it matters:

We want no one falling through the cracks. If someone needs a call, it’s a task – not a memory.

5.6 Workshops / Events

We will run group workshops.

Fields:

- Workshop name
- Date & time
- Location (Office / Online)
- Attendees (linked to Contacts/Leads)
- Registered vs attended
- How many booked consults from the workshop
- How many deals came from that workshop

Why it matters:

Workshops are a big future focus. We need to see if they’re worth the time based on real numbers.

6. Pipelines & Stages – Our “Clear Path to Cash”

We want our sales process mapped as pipelines so we can visually see people moving forward.

6.1 Pipeline 1 – Lead to First Consult

Stages (in order):

1. New Lead – Uncontacted
2. Contacted – Waiting to Book
3. First Consult Booked
4. First Consult Completed
5. First Consult No Show
6. Not Qualified / Dead

Why:

This shows whether our problem is contacting leads, getting them to book, or getting them to show up.

6.2 Pipeline 2 – First Consult to Strategy / Paid Offer

Stages:

1. Qualified – Needs Strategy
2. Strategy Session Booked
3. Strategy Session Completed
4. Not Ready – Nurture
5. Disqualified

Why:

This shows whether our consults are turning into deeper conversations or stopping at “thanks for the chat”.

6.3 Pipeline 3 – Strategy to Deal & Settlement

Stages:

1. Deal Identified (property / product option agreed in principle)
2. Proceeding – In Progress
3. Awaiting Contracts / Approvals
4. Settled / Completed
5. Lost

Why:

This shows where deals are getting stuck and how long money takes to actually hit our accounts.

7. Automations – What We Want the System to Do For Us

We don’t want “over-automation”. We want clean, reliable basics.

7.1 Door-Knock Lead Capture

Flow:

- Door knocker speaks to someone at the door.
- If they’re open, the rep fills in a simple mobile form (Google Form or similar) with:
 - Name
 - Mobile
 - Address
 - A few key qualifying answers
 - Rep name

Automation requirements:

- Create a Lead in the system with all fields populated.
 - Tag Source = “Door Knock”, Rep = [Rep Name].
 - Trigger an instant SMS to the lead, e.g.:

“Hey [First Name], it’s [Rep Name] from Kismet. Thanks for the quick chat just now. I’ll be in touch soon to go through your Smart Money options. – Kismet Finance Group”
 - Create a Task (for Josh or a closer) to review and/or book a consult.
-

7.2 Digital Lead Capture (Meta / Website)

Flow:

- A prospect fills in a Meta lead form or website form.

Automation requirements:

- Create a Lead record.

- Source = “Meta Ad” or “Website Form” etc.
 - Trigger:
 - Thank you SMS
 - Thank you email (if email collected)
 - (Future: option to plug in a booking link – please structure it so this is easy to add later.)
-

7.3 Consult Booking & Reminders

When a consult is booked (either by us or through a booking link):

- Create an Appointment linked to the Contact.
- Sync to Google Calendar.
- Send:
 - Confirmation SMS/email immediately with option for them to add it too their calendar.
 - Reminder SMS 24 hours before.
 - Reminder SMS 2 hours before.

If the consult is marked “No Show”:

- Move the Contact/Lead to “First Consult No Show” stage.
 - Automatically create a follow-up task to reach out and rebook.
 - Optional: send a “Sorry we missed you, would you like to reschedule?” SMS.
-

7.4 Strategy Session / Paid Session Flow

After a consult, if they are a good fit:

- We move them to “Qualified – Needs Strategy”.
- When a strategy session is booked:
 - Create Appointment as above.
 - Track whether it’s a paid session or complimentary.

After the strategy session:

- On “Completed”, system should prompt:
 - Create an Opportunity/Deal (if moving forward)
 - Or move to “Not Ready – Nurture” with a follow-up schedule

We want this section flexible, but the core flow must be clear and consistent.

7.5 Missed Call → Text-Back

For the main Kismet phone line(s):

- If a call is missed during business hours:
 - Send automatic SMS:

“Hey, you’ve reached Kismet Finance Group. We just missed your call. Reply here and we’ll get back to you shortly.”
- Log the call in the system.
- If the number isn’t recognised:
 - Create a new Lead with minimal info (phone only) for us to complete later.
- Create a Task to call them back.

If this needs a telephony platform (Twilio / similar), include it in your System Plan.

7.6 Nurture & Follow-Up (Lightweight)

For people marked as Not Ready – Nurture:

- Set up a light nurture structure:
 - Example: every 30–60–90 days:
 - create a task to call
 - or send a manual/templated check-in SMS/email

We don't need full content or long sequences now – just the framework, so we can drop content in later.

8. Dashboards & Reporting – What We Need to See

We want simple, clear dashboards that tell us:

8.1 Core Metrics

Per selected date range (daily/weekly/monthly):

- New Leads by source
- Number of consults booked
- Consult show rate (Completed vs Booked)
- Strategy sessions booked
- Deals created
- Deals settled
- Estimated commissions in pipeline
- Actual commissions recorded as received

8.2 Per-Rep Metrics

For each rep / closer:

- Leads generated
- Consults held
- Strategy sessions completed
- Deals created
- Deals settled

This can be:

- built-in CRM dashboards, or
- Google Looker Studio dashboards on top of Sheets/Airtable

We don't care about the tool as much as: it must be easy to read and update automatically.

9. Documentation & Handover – Non-Negotiable

We must be able to run this without you hand-holding us every day.

We need:

1. System Map
 - Simple diagram of tools and how data flows between them.
2. User Guides
 - How to add a Lead
 - How to update Contact details

- How to move someone through the pipeline
- How to book and log consults
- How to create and update Deals
- How to complete tasks
- How to view dashboards

3. Automation Notes

- For each automation:
 - What triggers it
 - What it does
 - Where it lives (Zap, scenario, flow, etc.)
 - Any special rules

4. Short Loom Videos

- “System Overview – for Shane & Josh”
- “Daily Use – for Reps & Josh”

We want the system understandable for a new team member in under an hour.

10. Security, Ownership & Access

- All tools and accounts created under our emails / org.
- You are added as admin for build.
- No secrets hard-coded where we can't see or change them.
- Any API keys stored in proper environment variables or settings.

When the project is complete and tested:

- We can safely remove your access without the system breaking.
-

11. Timeline & Milestones

We'd like this structured in phases so we can see progress.

Phase 1 – System Plan & Base Setup (approx. Week 1)

- Deliver System Plan (tools, diagram, explanation).
- Set up core data structure (Leads, Contacts, Deals, Appointments).
- Implement basic pipeline stages.
- Prove basic “add lead → move through stages” flow works manually.

Phase 2 – Core Automations (approx. Weeks 2–3)

- Door-knock lead capture form + automation.
- Digital form / Meta lead capture integration.
- Consult booking + reminder automation.
- Simple dashboards (even in rough form).

Phase 3 – Advanced Flows & Handover (approx. Weeks 3–4)

- Missed call → text-back system.
- Strategy session flow + handoff to deals.
- Final dashboards polished.

- Documentation finished.
- Loom videos recorded.

We understand timelines can shift once you dig in – but we do want momentum and clear check-ins.

12. Success Criteria – How We'll Judge the Build

We will consider this a success if:

- Our team can:
 - add leads
 - move contacts through stages
 - book and track consults
 - see who to call each day
- The system:
 - runs reliably
 - doesn't constantly error out
 - is understandable from your docs
- We can open a dashboard and clearly see:
 - how many leads we got
 - how many consults we had
 - where people are dropping off
 - how many deals are in progress
 - roughly what money is coming
- We feel confident enough in the structure to:
 - start plugging in paid offers
 - run workshops
 - and later, scale this with more automation and AI.

If this build hits those marks, it's a strong green light for us to move forward with you in a much bigger way under Good AI.

Best regards.
