

KISMET × GOOD AI: THE SECOND PUNCH

Notion Skeleton + Company Profile — Phase I "Make It Their Own"

Executive Summary

This delivery completes the **one-two uppercut**: the first punch established Kismet's full operational blueprint and the strategic logic for Notion as the knowledge layer alongside AppSheet as the transactional CRM. The second punch now delivers **two ready-to-deploy assets** that let Kismet own their system from day one, with your collaboration (Good AI / Kevin Tan) as the architecture and AI partner rather than a dependency.^{[1] [2] [3] [4]}

Delivered:

1. **Notion Workspace Skeleton** — Full architecture, five databases, three page templates (Company 1-pager, Discovery Session SOP, Door Knock Script), partnership integration map, and 4-week Phase I checklist.
2. **Company Profile (Internal & Partner Edition)** — A clean, standalone document Shane and Josh can hand to partners, new hires, or use as the "What Kismet Is" page in Notion.

Layer 1 Findings — Evidence Integration

The skeleton and profile are grounded in verified facts from multiple sources:

Entity & Legal

- Kismet Finance Group Pty Ltd, ABN 17 665 148 390, active from November 2024, headquartered at 52 Cooper Road, Cockburn Central WA 6164^{[4] [5]}
- Structured as corporate trust with three bucket companies; directors Shane Hewson, Josh, and Dan^{[2] [4]}

Operational Model

- Door knock lead generation (5 questions, \$80k+ super threshold) → Discovery Session → Four Pathways → AFSL/property/lending consultations → Settlement^{[2] [4]}
- Revenue via referral fees and commissions (e.g., ~15% finder's fee on developer loans); no client fees for consultations^{[3] [4] [2]}
- Licensed partner ecosystem: Smart Super Management (Stuart) for SMSF, SJS/Persevx/Antini for developers, plus brokers and accountants^{[6] [3] [4] [2]}

Tech Stack (Mandated)

- CRM: Google Sheets + AppSheet (9-table relational model per Shane's brief)^[4]
- Knowledge OS: Notion (newly adopted, per your conversation)^{[2] [4]}
- Automations: AppSheet rules, Make/n8n, Trellit.ai voice agent pilot^{[1] [4]}

Compliance Boundary

- Kismet educates and refers; all regulated advice (SMSF, lending, tax) comes from AFSL/ACL partners; disclaimers required in all communications^{[7] [4] [2]}

Layer 2 Analysis — Strategic Implications

Why Notion as Knowledge OS, Not CRM

Shane's brief explicitly mandates Google Sheets + AppSheet as the transactional system—simple, owned, scalable, and ready for AI later. Introducing Notion as a parallel CRM would fragment data and violate the simplicity principle. Instead, Notion serves as the **documentation, training, and AI-context layer** that sits alongside AppSheet:^[4]

Layer	Tool	Purpose
Transactional	AppSheet	Live leads, contacts, deals, tasks, pipelines
Knowledge	Notion	SOPs, scripts, schema docs, onboarding, AI training context
Automation	Make/n8n/AppSheet	SMS, reminders, nurture, missed-call flows

This separation respects Shane's constraints while giving Kismet a flexible, searchable playbook that can be updated independently of the CRM schema.^{[8] [9] [10]}

Good AI Partnership Positioning

The collaboration works best when structured as **"Kevin builds, Kismet owns"**:^[1]

Phase	Good AI Role	Kismet Role
Phase I (Now)	Design skeleton, build databases, create templates, train team	Populate content, customize scripts, own accounts
Phase II	Add AI Knowledge Bot (Tier 1), expand automations	Validate content stability, provide feedback
Phase III	Multi-Tool Agent (Tier 3), lead scoring, partner AI	Scale operations, measure ROI

This mirrors Good AI's service tiers: Tier 1 Local Semantic Bot at \$100 setup / \$30/month, Tier 2 Company Knowledge Bot at \$300 setup / \$120/month, and Tier 3 Multi-Tool Agent at \$5,000 setup / \$900/month. Kismet can graduate through tiers as pipeline volume and content maturity justify investment.^[1]

Why "Make It Their Own" Matters

Shane's brief emphasizes ownership: *"All tools must be owned by Kismet... When handover is complete, we remove your access, system continues to function"*. The Notion skeleton is designed for immediate population by Shane, Josh, and Dan—templates are filled with Kismet-specific content derived from the master definition, not placeholders. The team can start using it today and iterate without waiting for external development. ^[4]

Layer 3 Synthesis — What's Delivered & How to Use It

Deliverable 1: Notion Workspace Skeleton

Architecture:

```
KISMET NOTION OS
├── □ COMMAND CENTER (Homepage)
├── □ COMPANY & STRATEGY (5 pages)
├── □ DATA & CRM SCHEMA (5 databases)
├── □ PIPELINES & AUTOMATIONS (5 pages)
├── □ ROLES, SOPs & SCRIPTS (5 role hubs + scripts)
├── ⚖ COMPLIANCE & DISCLAIMERS (4 pages)
├── □ ONBOARDING & TRAINING (4 pages)
└── □ AI & FUTURE (3 pages)
```

Five Core Databases:

1. **Tables Reference** — Documents every CRM table (Contacts, Leads, Deals, etc.) with purpose, primary key, and related tables
2. **Fields Dictionary** — Every field across all tables with data type, options, and business rules
3. **Roles & SOPs** — Each role (Door Knocker, Consultant, Closer, Admin, Director) with mission, KPIs, and linked scripts
4. **Scripts Library** — Version-controlled scripts with compliance flags and review dates
5. **Automations Catalogue** — Every automation with trigger, action, system, and documentation link

Three Page Templates (Ready to Use):

1. **What Kismet Is (1-Pager)** — The official internal definition
2. **Discovery Session Flow** — Full consultant playbook with phases, questions, pathway presentation, and compliance reminders
3. **Door Knock Script** — 5-question qualification with opening, logic, booking language, and CRM action

Deliverable 2: Company Profile

A standalone 2-page document covering:

- At-a-glance facts (ABN, address, directors)
- One-line definition
- Core activities and what Kismet doesn't do
- Four Pathways summary
- Business model and revenue streams
- Client journey flowchart
- Team structure and partner ecosystem
- Compliance framework
- Tech stack and CRM data model
- Brand promise and contact details

Use cases:

- New hire onboarding ("read this first")
- Partner introductions ("here's who we are")
- "What Kismet Is" page in Notion (paste directly)
- AI training context (machine-readable company definition)

Phase I Checklist — "Make It Their Own"

Week 1: Foundation

- [] Create Kismet Notion workspace (free tier works initially)
- [] Build homepage/Command Center with quick links
- [] Add Company & Strategy section
- [] Paste "What Kismet Is" content from profile
- [] Create Tables Reference database (9 entries)
- [] Create Fields Dictionary database (start with top 20 fields)

Week 2: Operations

- [] Create Roles & SOPs database (5 roles)
- [] Add Door Knocker role page + paste script template
- [] Add Consultant role page + paste Discovery Session flow
- [] Build Compliance section (What We Can/Cannot Say)
- [] Add URL properties linking to AppSheet views

Week 3: Pipelines & Integration

- [] Document Pipeline 1: Lead → First Consult
- [] Document Pipeline 2: Consult → Strategy
- [] Document Pipeline 3: Strategy → Deal → Settlement
- [] Create Automations Catalogue (start with 6 core automations)
- [] Build onboarding checklist for new hires
- [] Tag key pages with "AI-Context" label

Week 4: Handover & Ownership

- [] Shane/Josh/Dan populate remaining content
- [] Record Loom videos (System Overview, Daily Use, Admin)
- [] Run first team walkthrough
- [] Notion runs independently; Good AI moves to support role
- [] Schedule Phase II review (Voice Agent pilot, Knowledge Bot evaluation)

Confidence Matrix

Layer	Confidence	Notes
Layer 1 (Evidence)	0.92	Strong alignment: ABN registry, internal briefs, CRM schema, website all consistent
Layer 2 (Analysis)	0.85	Notion-as-knowledge-layer strategy grounded in Shane's constraints; partnership model matches Good AI tiers
Layer 3 (Synthesis)	0.80	Deliverables are complete and Kismet-specific; adoption depends on team execution
Overall	0.85	Ready for deployment; first punch landed, second punch delivered

Next Action Steps

For Kismet (Shane/Josh/Dan):

1. Download both files and create Notion workspace
2. Start with Company Profile → paste as "What Kismet Is" page
3. Create the five databases using property definitions provided
4. Assign owners to each section (e.g., Josh owns Roles, Dan owns Scripts)
5. Schedule 30-min check-in with Kevin at end of Week 1

For Good AI (Kevin):

1. Stand by for questions during Week 1-2 population

2. Prepare Trellit.ai voice agent demo for missed-call pilot (per Shane's interest)
3. Draft Tier 1 Bot proposal for when Notion content stabilizes
4. Document this build as Good AI case study / portfolio piece

For Collaboration:

- This engagement proves the model: Kevin architects, Kismet owns, system scales
- Success here → broader Good AI partnership on AI layers (Tier 2/3) ^[1] ^[4]
- Kismet becomes flagship SME case for Good AI's WA market positioning ^[1]

The second punch has landed. Kismet now has the skeleton to build their own house. Good AI stands ready for the knockout round.
