

Kismet Business OS: The "Truth & Flow" Build

Prepared by: Good AI Australia **For:** Kismet Finance Group **Date:** January 16, 2026 **Timeline:** 15-Week Integration & Adoption Cycle

1. The Mission

To build a **Business Operating System** that allows Kismet to scale face-to-face consulting without scaling administrative chaos.

- **Primary Outcome (Shane's Truth):** Leadership can sit anywhere in the world and see the *exact* state of the business—truthful activity, real-time revenue, and compliance gaps—in under 60 seconds.
- **Secondary Outcome (The Consultant's Flow):** Consultants feel like "pros." The technology melts away, allowing them to remain "Conversation-First, Screen-Second."

2. The Non-Negotiables (Rules of Engagement)

We are not building a generic CRM; we are building a Kismet-specific enforcement engine.

The "Melted Butter" Rule

- **< 60 Seconds:** Post-appointment admin must take less than one minute.
- **The Workflow:** Tap Outcome → Record Voice Note → Confirm Next Action.
- **Zero Typing:** If a rep is typing a paragraph on a phone, the system has failed.

Data Integrity & Compliance

- **No Notes = It Didn't Happen:** An appointment marked "Sat" without a voice note triggers an immediate escalation.
- **One Source of Truth:** Notion is the Cockpit. Everything (Docs, Calendars, Tasks) flows *from* or *to* Notion.
- **Pathways are Rigid:** A client is either on the **Housing Pathway** (Velocity) or **SMSF Pathway** (Compliance). The system enforces the correct docs for each.

3. The Architecture (The Good AI Stack)

We utilize a **Hub-and-Spoke** model to ensure stability and scalability.

| **Component** | **Tool** | **Purpose** | | **The Cockpit** | **Notion** | The single interface for Reps and Leadership. CRM, Pipeline, & Tasks. | | **The Brain** | **n8n + AI Studio** | The invisible logic layer. Handles escalations, data routing, and AI drafting. | | **The Warehouse** | **Google Workspace** | Storage (Drive), Drafting (Gemini), and Briefings (Vids). | | **The Legal Rail** | **DocuSign** | Automated template dispatch and signature tracking. | | **The Scoreboard** | **Looker Studio** | The

"Bali Dashboard" for real-time ROI and Performance analytics. |

4. The 15-Week Execution Roadmap

We have expanded the build to **15 weeks** to ensure not just technical delivery, but **operational adoption**.

Phase 1: Foundations (Weeks 1-2) - [COMPLETED]

- **Goal:** The Digital Bedrock.
- **Deliverables:**
 - Data Model (People, Households, Entities) fully deployed.
 - Google Drive Automation (Folder structures auto-create).
 - Housing vs. SMSF Pathway triggers active.

Phase 2: Enforcement & Logic (Weeks 3-5)

- **Goal:** The "Data Police."
- **Focus:** Implementing the automation that stops bad data from entering the system.
- **Deliverables:**
 - **The Escalation Gate:** 2-hour warnings for missing notes; 24-hour manager alerts.
 - **DocuSign Integration:** One-click sending from Notion; auto-filing of signed PDFs.
 - **Pathway Switch:** n8n logic that differentiates between Lead velocity and SMSF compliance tasks.

Phase 3: Field Operations (Weeks 6-8)

- **Goal:** Mobilizing the Consultant.
- **Focus:** Removing friction from the driveway and doorstep.
- **Deliverables:**
 - **Door Knocking Capture:** Branded mobile webforms (Google Maps integration).
 - **Campaign Database:** Tracking suburb movement and territory assignment.
 - **Field Stress Test:** A selected group of "Beta Reps" test the mobile flow in the wild.

Phase 4: The Voice & Dashboard Integration (Weeks 9-11)

- **Goal:** Visibility and Integration.
- **Focus:** Connecting the phone system and visualizing the "Truth."
- **Deliverables:**
 - **Voice Provider Integration:** (Aircall/3CX) connection to the AI Brain.
 - **Voice-to-Note Pipeline:** Automated transcription and summarization into Notion.
 - **The Bali Dashboard:** Looker Studio embedding into Notion (Activity, Conversion, Compliance).

Phase 5: Training & AI Polish (Weeks 12-15)

- **Goal:** Full Adoption.

- **Focus:** Ensuring the team uses the tool as intended.
- **Deliverables:**
 - **"Kismet Assistant" Tuning:** Refining AI drafts to sound like Kismet consultants.
 - **Ride-Along Training:** Technical team shadows consultants to fix final UX friction.
 - **Handover:** Full SOP documentation and system key transfer.

5. Success Criteria (How We Win)

1. **Zero "Ghost" Appointments:** 100% of "Sat" appointments have audio/text notes attached.
2. **60-Second Admin:** Consultants consistently log outcomes in under one minute.
3. **The Truth:** Shane can open the dashboard and accurately predict revenue and identify stalled files without asking a human.

End of Scope
