

APPENDIX A: TECHNICAL SPECIFICATIONS & BUILD MANUAL v1.9

Status: CONFIDENTIAL / LOCKED **Target Architecture:** Stitch UI → AI Studio Logic → n8n

Backend → Notion DB **Timeline Reference:** Strategic Platform Deployment (~16+ Weeks)

Objective: Operational Efficiency & Grant Readiness

SECTION 1: THE CONSTITUTION (CONSTRAINTS)

2.1 Simplicity Rules

1. **Notion is the cockpit.** Everything is accessible from Notion or launched from it.
2. **Phone-first for reps.** Minimal typing. Big buttons. Interfaces must pass the "Thumb Test."
3. **No feature creep.** If it doesn't reduce admin or enforce accountability, it does not ship.
4. **One source of truth.** No duplicate CRMs.
5. **Base build only.** MVP. No portals, no predictive AI yet.

2.2 Data Integrity Rules

1. **People are always separate.** Never create "John & Jenny."
2. **Household merges people.** This is the "Client View."
3. **Entities exist for legal structures.** (SMSF, Trust, Company).
4. **Birthdays live on People.** Households do not age.
5. **No notes = It didn't happen.** Escalation trigger if "Sat" but empty notes.

2.3 Compliance / Safety Rules

1. **AI is a Drafter.** AI summarizes and drafts; it never advises or decides.
2. **Human Review Gate.** All drafts must be approved.
3. **Recording.** Only when lawful.

SECTION 2: TECH STACK (THE ENGINE)

- **Frontend (The Face): Google Stitch** (Labs) → React Code.
 - *Hosted on:* Firebase Hosting.
- **Wiring (The Glue): Google AI Studio.**
 - *Prompt Strategy:* "Wire these UI buttons to POST JSON to n8n webhook."
- **Backend (The Brain): n8n.**
 - *Role:* Webhook receiver, PDF generator, Notion updater.
- **Intelligence Layer (The Mind): Vertex AI Agent Builder** (GCP).
 - *Integration:* Native connector to **Google Workspace Drive** (SOP Folder).

- *Role:* Context-aware drafting and answering based on Kismet SOPs.
- **Database (The Truth): Notion.**

SECTION 3: DATA MODEL & MOBILE VIEW SPECS

Implement exactly as defined. "Stitch UI" notes refer to the React frontend components.

5.1 People (1 record = 1 human)

- **Fields:** First Name, Last Name, Phone, Email, Birthday, Status, Linked Household, Linked Entities, Notes.
- **MOBILE VIEW (Stitch UI Specs):**
 - **Component:** `PersonCard` .
 - **Visual:** Profile Photo (Placeholder), Name (Bold), Status Badge.
 - **Actions:** Two massive buttons: [ CALL] [ SMS].
 - **Edit Mode:** Modal pop-up. No inline editing (prevents fat-finger deletion).

5.2 Household (The "One Client View")

- **Fields:**
 - Household Name (e.g., "Smith - Cockburn")
 - Address
 - Members (Relation)
 - Primary Contact
 - Linked Deals
 - Last Interaction
 - Next Action
 - **Doc_Status:** (Select: Sent / Viewed / Completed)
 - **Drive_Link:** (URL)
- **MOBILE VIEW (Stitch UI Specs):**
 - **Component:** `HouseholdDashboard` .
 - **Header:** Family Name + Address (Text Only - No Map Embed).
 - **Body:** List of "Members" (Tap to expand details).
 - **Footer:** Floating Action Button (FAB): "Start Appointment".

5.3 Entities (Legal Structures)

- **Fields:** Entity Name, Type (SMSF/Trust/Co), Linked People + Role, Linked Household.
- **MOBILE VIEW (Stitch UI Specs):**
 - **Visual:** Displayed as a "Chip" or "Tag" on the Household view.

- **Interaction:** Read-only for reps. Admin edit only.

5.4 Leads / Pipeline (Simple Approach)

- **Logic:** Pipeline runs off **Households**. Stage is on Household.
- **Linked:** Appointments link to Household (and optionally primary person).
- **MOBILE VIEW (Stitch UI Specs):**
 - **Component:** PipelineKanban .
 - **Layout:** Vertical scrolling list of cards (easier on mobile than horizontal).
 - **Card Details:** Household Name, Suburb, Days in Stage (Red if > 7 days).

5.5 Appointments

- **Fields:**
 - Household
 - Date/Time
 - Type (Discovery / Follow-up / Signing / Check-in)
 - Outcome (Sat / No show / Rescheduled)
 - Notes Completed (Yes/No)
 - Next step date/time
- **MOBILE VIEW (Stitch UI Specs):**
 - **Component:** ActiveAppointmentMode .
 - **The "Outcome" Screen:** This is the most critical UI element.
 - **Layout:** Three massive, colored buttons taking up 50% of the screen:
 -  *SAT*
(Green)
 -  *NOSHOW*
(Red)
 -  *RESCHED*
(Yellow)
 - **Logic:** Tapping

 *SAT*

immediately reveals the "Microphone" icon for the Voice Note.

5.6 Tasks

- **Fields:**
 - Household
 - Owner (rep)
 - Due date/time
 - Status
 - Task type
 - Overdue flag
- **MOBILE VIEW (Stitch UI Specs):**
 - **Component:** `TaskList` .
 - **Interaction:** Swipe Right to Complete. Swipe Left to Snooze.

SECTION 4: DOOR KNOCKING (FIELD OPS)

6.1 Area Assignment (Consultants Move as One)

- **Concept:** Campaign / Area → Suburb → Street.
- **Notion DB:** "Campaigns" Database.
- **MOBILE VIEW:** Simple List View.
 - *Header:* "Current Run: Cockburn"
 - *Body:* List of assigned streets (e.g., "Smith St", "Jones Rd").
 - *Filter:* Only show "Active" streets assigned to logged-in Rep.

REQUIRED AUTOMATION LOGIC:

1. **Define Hierarchy:** Ensure `Campaign` is Parent of `Suburb` , and `Suburb` is Parent of `Street` .
2. **Status Sync:** If all Streets in a Suburb are marked `Completed` , auto-update Suburb status to `Completed` .
3. **Assignment:** One-click assignment in Notion (Manager View) pushes the list to the Rep's mobile view instantly.

6.2 Door Knock Capture (The "Click House → Survey" Workflow)

- **The Requirement:** Stand at door, tap button, capture address, fill survey.

REQUIRED AUTOMATION LOGIC:

1. **Address Capture (GPS):** Rep hits "New Knock" → App grabs Lat/Long → Calls Google Maps API → Returns clean Address String.
2. **Form Submission:** Rep fills Survey (Owner/Renter, Solar Y/N, Interest 1-5).
3. **Webhook Trigger:** Submitting form sends JSON payload to n8n.

4. n8n Action Sequence:

- **Create Household:** Name it "

Address

-

Suburb

".

- **Create People:** If name/phone provided, create Person record and link to Household.
- **Assign Rep:** Auto-fill "Owner" field based on who submitted the form.
- **Create Task:** If "Interest Level" > 3, auto-create "Follow Up" task due in 48 hours.

The "Stitch" UI & Branding Requirements:

1. Address Lookup (GPS Text Only):

- *UI:* Big Button "Grab Current Address".
- *Constraint:* NO Map Interface/Pins. Pure text capture.

2. The Survey (Branded):

- *UI:* If the door is opened, the rep switches to "Survey Mode."
- *Branding:* High-end Kismet Logo at top. Clean white background (high contrast).
- *Inputs:* Large Toggles (Owner/Renter), Yes/No Buttons (Solar?), 1-5 Slider (Interest).
- *Note:* This form must look "Client Ready" in case the rep hands the tablet to the homeowner.

3. The "New Knock" Button:

- Always visible Floating Action Button (FAB).

6.3 Presentation Launcher (The "Showtime" Mode)

- **The Requirement:** One-tap access to the latest approved Sales Deck.
- **The Logic (HQ Control):**
 1. Rep taps "Present" on the Household Dashboard.
 2. App fetches the current Presentation URL from the Campaigns Database in Notion (e.g., Pitch.com link or Google Slide embed).
 3. App opens **Full Screen Webview**.
 4. **Crucial:** Hides all "Admin" buttons/tasks so the client doesn't see CRM data.
- **Stitch UI Specs:**
 - **Component:** PresentationModal .
 - **Visual:** Full screen overlay.

- **Interaction:** "Exit Presentation" button hidden in top corner (requires long press to exit) to prevent accidental closing during the pitch.

SECTION 5: DOCUMENT PIPELINE (AUTOMATION)

- **Concept:** The "Invisible Admin" workflow. No manual uploads/downloads.
- **Engine:** n8n acts as the courier between Notion, DocuSign, and Drive.

7.1 Auto-Folder Creation (The "Bucket")

- **Trigger:** New Household created in Notion.
- **n8n Action:**
 1. Create Google Drive Folder named [Household Name] .
 2. Create Subfolders: /Contracts , /ID , /Financials .
 3. **Sync Back:** Paste the Google Drive Link into the Drive_Link field on the Notion Household page.

7.2 Sending Contracts (The "Launchpad")

- **Trigger:** Rep clicks "Send Authority" button in Notion (Button Property).
- **n8n Action:**
 1. Fetch Primary Contact Name/Email from Notion.
 2. Populate DocuSign Template (Authority to Act).
 3. Send Envelope via DocuSign API.
 4. Update Notion Doc_Status to **Sent**.

7.3 Receiving Contracts (The "Catch")

- **Trigger:** DocuSign Webhook (Envelope Completed).
- **n8n Action:**
 1. Download signed PDF.
 2. Upload PDF to the specific [Household]/Contracts folder in Drive.
 3. Update Notion Doc_Status to **Completed**.
 4. Attach the specific file link to the Notion Deal record.

SECTION 6: PHONE & CALLS (AGNOSTIC INTEGRATION)

- **The Goal:** Capture meaningful conversations regardless of the provider.
- **Architecture:** Provider Agnostic Webhook Receiver (Dialpad / Aircall / Twilio).

9.1 The "Universal Receiver" Workflow

- **Concept:** n8n listens for a standard "Call Ended" event, regardless of which app sends it.

- **Supported Providers:**
 - **Dialpad:** Uses Native Integration / Webhook.
 - **Aircall:** Uses Native Integration.
 - **Twilio:** Custom build (Fallback option).
- **The Logic Flow:**
 1. **Trigger:** Provider sends `call_ended` JSON payload to n8n webhook.
 2. **Match:** n8n searches Notion for `Person` matching the `Caller_ID` (Phone Number).
 3. **Log:** Creates `Interaction` record in Notion.
 - Status: `Completed`
 - Duration: `[Duration]`
 - Recording: `[Recording_URL]` (if legally recorded).

9.2 The "Dispo" Workflow (App Side)

- **Trigger:** Rep hangs up the phone (in Dialpad/Aircall app).
- **Action:** Rep switches back to **Stitch App**.
- **Step 1: Disposition:** Rep taps ONE outcome button:
 - `[Connected]` / `[Left VM]` / `[Wrong Number]` / `[Do Not Call]`
- **Step 2: The Voice Note (Mandatory for "Connected"):**
 - App prompts: "Dictate Notes."
 - Rep speaks.
 - App uploads audio to n8n.
- **Step 3: The AI Summary:**
 - n8n transcribes the Voice Note (using Gemini/OpenAI).
 - **Controller Logic:** n8n sends text to **Vertex AI Agent**.
 - **Brain Logic:** Vertex AI Agent (Grounded in SOPs) reformats the note to match Kismet Compliance Standards.
 - **Action:** Updates the `Interaction` record in Notion with the "Perfect Summary."

9.3 The "Iron Law" (Enforcement)

- **Rule:** If `Disposition` = "Appointment Booked" OR "Appointment Sat".
- **Constraint:** The system **blocks** the user from closing the screen until a Voice Note or Text Note is added.
- **Logic:** "You cannot claim a win without proving the work."

SECTION 10: THE BALI DASHBOARD (OWNER VIEW)

- **Platform:** Looker Studio (Powered by Notion Data).

- **The Golden Rule:** If Shane can't judge performance in 60 seconds, the dashboard is wrong.

10.1 Activity Metrics (The "Effort")

- **Visual:** Bar Charts (Time Series: Daily/Weekly).
- **Metrics:**
 1. **Calls per Rep:** Total call logs from Dialpad/Aircall.
 2. **Appointments Booked:** Count of `Household` stage changes to "Appointment Booked."
 3. **Appointments Sat:** Count of `Appointment` records with Outcome = "Sat."

10.2 Conversion Funnel (The "Result")

- **Visual:** Funnel Chart.
- **Stages:**
 1. Booked
 2. Sat (Conversion Rate %)
 3. Progressed (Conversion Rate %)
 4. Sold (Conversion Rate %)

10.3 Compliance Scorecard (The "Naughty List")

- **Visual:** Table (Red/Green conditionally formatted).
- **Metrics:**
 1. **Notes Compliance %:** (Sat Appointments WITH Notes / Total Sat Appointments).
Target: 100%.
 2. **Overdue Tasks:** Count of Tasks with `Due Date` < Today AND `Status` != Done.
 3. **Ghost Appointments:** List of specific appointments marked "Sat" but missing outcomes.
 4. **Stalled Cases:** List of Deals in "Active" stage for > 14 days with no `Next Action Date`.

10.4 Geography (The "Map")

- **Visual:** Geo Map / Heatmap (by Suburb).
- **Metrics:**
 1. **Door Knocks Completed:** Total logs from Field App.
 2. **Leads Created:** Total new Households.
 3. **Bookings:** Conversion rate per suburb.
- **Logic:** Connects to the `Campaigns` Database to visualize territory saturation.
- **Embed Strategy:**

- **Mobile:** Looker Report embedded in Stitch App as "Leadership View".
- **Desktop:** Looker Report embedded in Notion "HQ" Page via `/embed`.

SECTION 11: AUTONOMOUS AGENTIC WORKFLOWS

Status: MANDATORY **Platform:** n8n (The Traffic Controller)

11.1 The "Must-Have" List (Grant Compliant)

1. New Door Knock Form:

- **Trigger:** Form Submit.
- **Action:** Create Household , Create Person , Create Task , Update Suburb metrics.
- **Grant Metric:** Tracks "Lead Velocity" and "Regional Coverage."

2. Appointment Created:

- **Trigger:** Notion DB Change (`Type = Appointment`).
- **Action:** Create Task: "Notes Required" (Due: 2 Hours After Appt Time).

3. Notes Missing (The Watchdog):

- **Trigger:** Hourly Schedule.
- **Condition:** `Outcome = Sat AND Notes = Empty AND Time_Since_Appt > 2 Hours`.
- **Action:** Escalate (See 11.2).

4. DocuSign Status:

- **Trigger:** Webhook.
- **Action:** Update Notion Status + Save PDF to Drive.
- **Grant Metric:** Ensures WORM Compliance for audit trails.

5. Birthdays:

- **Trigger:** Daily Schedule (9 AM).
- **Condition:** `Person.Birthday = Today`.
- **Action:** Send "Happy Birthday" SMS/Email draft to Rep (Do NOT auto-send to client).

6. Weekly Scorecard:

- **Trigger:** Friday 5 PM.
- **Action:** Generate PDF Summary of Rep Stats -> Email to Rep & Manager.

11.2 Escalation Ladder (Simple)

- **Level 1 (2 Hours Overdue):** Email/Notification to Rep. "Missing notes for

Client

. Please update."

- **Level 2 (Next Morning):** Email to Manager. "Rep

Name

has missing notes for

Client

. KPI Impacted."

- **Channel:** Email Only (V1). No Slack integration required unless already active.

SECTION 12: THE KISMET INTELLIGENCE ENGINE (VERTEX AI)

Constraint: V1 AI is an **Internal Assistant Only**. **Prohibited:** Autonomous agents sending messages to clients.

12.1 The Knowledge Base (Grounded Truth)

- **Tech:** Google Vertex AI Agent Builder (GCP).
- **Source:** Shared Google Drive Folder ("SOPs", "Compliance Guides", "Templates").
- **Ingestion:** Native connector syncs Drive files to Vertex Vector Search automatically.

12.2 The "Kismet Assistant" (Notion Implementation)

- **UI:** A "Kismet AI" Page in Notion for consultants.
- **Button 1: "Summarise Voice Note"**
 - *Input:* Audio file.
 - *Logic:* n8n → Vertex AI (Prompt: "Summarize this using the 'File Note Standard' in SOP 4.2").
 - *Output:* Structured text block.
- **Button 2: "Draft Follow-Up"**
 - *Input:* "Draft email to John about refinancing."
 - *Logic:* n8n → Vertex AI (Prompt: "Write an email based on 'Refinance Template B', tone: Professional").
 - *Output:* A draft text block. **Must be copy-pasted/reviewed by Rep.**
- **Button 3: "Next Step Checklist"**
 - *Input:* "Sat appointment, client interested in SMSF."
 - *Logic:* Vertex AI retrieves "SMSF Pathway Checklist" from SOPs.
 - *Output:* "1. Send SMSF Guide. 2. Book Fact Find. 3. Check Trust Deed."

SECTION 13: GRANT READINESS & AUDITABILITY

Purpose: Preparing Kismet data for Grant Applications & Government Compliance.

13.1 Impact Metrics (Auditable)

- **Concept:** Tracking data points specifically required for business growth grants.
- **Metrics Logged:**
 - **Job Creation:** Reps active per month (from User Activity Logs).
 - **Regional Coverage:** Heatmap of service delivery in target postcodes (Looker).
 - **Efficiency Gains:** "Time Saved" metric calculated from AI Summaries vs Manual Entry.

13.2 Data Sovereignty

- **Policy:** All client PII (Personally Identifiable Information) remains within **Google Workspace (Australia Region)**.
- **AI Processing:** Vertex AI (GCP) ensures enterprise-grade security; no data training on public models.

SECTION 14: PROJECT ROADMAP (STRATEGIC DEPLOYMENT)

Timeline: 16+ Weeks (Flexible to ensure Grant Compliance)

Phase 1 (Week 1–2): Foundations

- Data Model (People/Household/Entities)
- Household Pipeline Views
- Tasks + Appointment Logging
- Drive Folder Automation

Phase 2 (Week 3–6): Enforcement + Docs

- Notes Compliance + Escalations
- DocuSign Templates + Auto-Save + Status Sync

Phase 3 (Week 7–10): Door Knocking + Area Movement

- Area/Campaign Database
- Door Knock Form Capture + Assignment + Reporting by Suburb

Phase 4 (Week 11–13): KPI + Bali Dashboard

- Rep Scorecards
- Conversion Funnels
- Suburb Dashboards

Phase 5 (Week 14+): Grant Compliance & Scalability Audits

- **Focus:** Data validation for grant reporting.
- **Deliverable:** "Kismet Growth Report" (Auto-generated from Looker).
- **AI Polish:** Refining Vertex AI prompts using real rep recordings.

- **Handover:** Full transfer of n8n credentials and GCP project keys.
